Abstracts

Establishments engaged in water well drilling tend to be small, independent contractors. Even the industry leaders tend to be small, seldom generating more than \$20 million in annual revenues. Some of the largest companies have diversified into other areas of construction or other types of drilling projects, such as oil, natural gas, and geothermal wells.

The nation's water supply comes from surface sources such as lakes, rivers, and streams, in addition to vast underground aquifers. Groundwater has often been preferred over surface water for use in homes and industry because it is relatively inexpensive to develop and treat, it contains no sediment, its chemical quality remains constant, and facilities to develop it can be situated on small plots of ground. Of the 408 trillion gallons of water consumed daily in the United States in the early 2000s, nearly 20 percent was ground water.

Contractors who drill wells to tap into underground water are largely dependent on new construction. In fact, community water mains and wells for single-family houses account for the vast majority of all business done by this industry. More than 15 million water wells provide 79.4 billion gallons of ground water daily to U.S. residents for community and single-family use, irrigation, livestock, and other agricultural, commercial, and industrial purposes. Irrigation accounted for the largest portion (60 billion gallons) of ground water usage.

This Report covers special trade contractors primarily engaged in water well drilling. Establishments primarily engaged in drilling oil or gas field water intake wells on a contract or fee basis are classified in.
