Abstracts

China is expected to lead the growth of the ethylene industry in the Asia Pacific region in the coming years. The Chinese government's 12th Five Year Plan (2011-2015) placed substantial focus on the domestic ethylene market, however, the domestic output of ethylene is still not sufficient enough to meet the downstream demand in China. With many new ethylene plants that came on stream by 2015, the Chinese ethylene output is expected to increase significantly by 2020.

Aruvian Research analyzes the Ethylene Industry in China in its research report *Analyzing the Ethylene Industry in China 2016*. The report starts off with an entire section dedicated to the analysis of the ethylene sector in Asia Pacific first and then moves on to the analysis of the ethylene market in China.

The ethylene market in China is analyzed through an industry overview, industry size, consumption of ethylene in the country by end use sectors, as well as an analysis of the import/export of ethylene in China.

The report analyzes the various ethylene plants in China, focusing on the output capacity of these plants in MMTPA. Feedstocks used in these plants, production processes as well as technology applied are also analyzed in the report.

Moving on, we take a look at some of the major ethylene projects in China Competition in the industry and a thorough analysis of the major industry players completes this research report. Each industry player is analyzed through a corporate profile, business segment analysis, company strategies, industry position and a SWOT analysis. In the case of foreign companies, we include an overview of their operations in China.
