Abstracts

The African continent has one of the largest mineral industries in the world. However, most of this is either under developed or in the initial stages of developments. For many African nations, their metals and mining industry remains the backbone of their economies and is key to the economic growth. Some of the largest mineral reserves in Africa include bauxite, cobalt, diamonds, platinum group metals, gold, iron ore, copper, etc. Due to lack of investment and various safety issues, the mining industry in Africa remained under developed for many years.

However, recent years have seen a flurry of activity from many multinational mining companies that are interested in developing the mining industry in Africa. Companies have started investing heavily in the development of the African mining industry and it is forecast that the coming years will likely witness the emergence of Africa as a major player in the global mining industry.

In this scenario, Aruvian Research analyzes the African mining industry in its research report Analyzing the Mining Industry in Africa 2016. This in-depth report begins with an overview of the mining industry in Africa through an industry background, industry overview and an outlook for the mining industry in Africa. Moving on, we analyze the major markets for mining in Africa. Mining markets analyzed in this report include Angola, Botswana, the Democratic Republic of Congo, Ghana, Mozambique, Namibia, South Africa, Tanzania, Zambia and Zimbabwe.

For each country we analyze the mining industry through industry statistics, regulatory framework, industry competition, industry forecast and an analysis of the various mining sectors such as gold mining, iron ore mining, platinum mining, palladium mining, and others.

Moving on from the major markets analysis, we look at the major mines in Africa. In total

we analyze nearly 95 mines in Africa.

An analysis of over 50 major players in the African mining industry through an overview, an analysis of their businesses and a SWOT analysis completes this comprehensive report on the African Mining Sector.
