Abstracts

While the US fertilizer industry grew at strong rates in the last couple of years, since 2013-2014 the market has been witnessing a decline in both value and volume terms. The industry is expected to continue to decline in the near future as well. Nitrogen (N) remained the largest segment of the fertilizer market in 2014 in the United States, accounting for 60% of the market's total value.

The United States is the largest importer of fertilizer in the world, with more than half of the nitrogen and over 85% of its potash coming from international sources. Fertilizer manufacturing establishments are located in the Southeast and West regions of the United States, representing a combined total of 45% of all recorded establishments. The Mid-Atlantic and Southwest regions followed closely, accounting for a respective 13% and 12% of establishment numbers. Most farming operations that use fertilizers are located in similar regions. For example, the Cotton Farming industry has 46% of its farms located in the Southeast

Top players in the market remain Agrium, Bunge Limited, The Mosaic Company, and others.
