Abstracts

The year 2022 has been all about post-COVID recovery for the global aerospace and defense sector. Industry trends look much better, and the aerospace and defense sectors look set to recover as companies focus on future growth through new technologies and solutions while keeping in mind that the COVID threat will perhaps never be entirely over.

There's no denying that the global COVID vaccination drive has set the path toward air travel resuming once again. There is the hope of things coming back to normal. Looking at the current trends, it seems like small and medium-sized carriers will be able to recover back to their pre-COVID times, and aircraft manufacturers are also focusing more on developing narrow-body aircraft. After the lows witnessed in 2020 and 2021, revenues are expected to rebound strongly in 2022 with the return of air travelers.

Increasing merger and acquisition activity, ever-changing business models, and new technologies are expected to rapidly accelerate the ongoing shift towards digital processes. Companies in the aerospace and defense industry are expected to go further digital, with smart factories taking over the supply chain eventually, giving rise to more efficient production along with a faster design-to-delivery process.
