Abstracts

A softswitch, an abbreviated form of ‘software switch’, is a generic term for any open application program interface (API) software that is used to bridge a traditional Public Switched Telephone Network (PSTN) and Voice Over Internet Protocol (VoIP), by linking PSTN to IP (Internet Protocol) networks and managing traffic that contains a mixture of voice, fax, data and video.

A softswitch separates call control functions of a phone call from the media gateway (transport layer). Softswitches are able to process signaling for all types of packet protocols. Softswitch is a software-based switching platform based on open systems as against traditional proprietary hardware-based switches. Softswitch is also called media gateway controller, call agent and gatekeeper.

Aruvian's R'search presents Analyzing the Global Softswitch Industry, a complete analysis of the softswitch analysis. Covering the basics of the technology, the report presents a regional analysis of the softswitch industry in North America, Asia Pacific, and Europe. The leading industry players such as Nortel and Alcatel is also included in the report.

A PEST framework analysis of the global softswitch industry, market profile of the global softswitch market, market statistics, market trends, and much more is included in this comprehensive research report.
