## Abstracts

Demand for disposable medical supplies in the United States is anticipated to rise substantially by 2016. The market has been witnessing a constant and steady growth for the past couple of years. The best opportunities are expected in intermittent urinary catheters, dry powder inhalers, prefillable syringes and transdermal patches, blood glucose test strips, polymer and biological wound closures and daily contact lenses.

In the United States, catheters, drug delivery & related disposables experienced the fastest growth among the other product groups. US also remains the largest market in terms of gloves usage and consumption is around 30 billion pieces of gloves annually. However, products sold in large quantities to hospitals and major health care providers are typically subject to competitive bidding processes or negotiated contracts that limit overall pricing flexibility. Also, the increasing availability of quality, low cost private label products is weakening the ability of brand name producers to command substantial pricing premiums in the home health care market.

Johnson and Johnson, 3M Company, etc. are the top players in the market. The use of plastic continues to expand within the growing medical disposables market. Future growth in the market is likely to emanate from rise in population, higher proportion of aging population and product innovations. Also, the aging baby boomer population coupled with increase in life expectancy rate across the world has considerably boosted the demand for incontinence products.
