Abstracts

The market for semiconductors in France expanded by a good 20% in the year 2011. France is responsible for almost nine percent of the European semiconductors market value. In the last two years, the industry has witnessed tremendous growth, with the major expansion registered in 2011 after the global financial turmoil. The growth was mainly backed by rise in investment by major international players, encouraged by rapid increase in consumer demand.

Now, with the increase in future demand for electronics and requirements in new application areas, the semiconductor market is expected to sustain high growth momentum. Product differentiation can be very strong. For example, a microprocessor manufacturer may launch a processor whose instruction set offers designers many attractive features, but is different to that of any other processor.

Samsung, Intel, Texas Instruments and ST Microelectronics are the leading players in the industry.

Aruvians Rsearch analyzes the semiconductors industry in France in its research presentation Analyzing the Semiconductors Industry in France.
