Regulation of the global electricity industry has historically been a tumultuous ride, resulting in dramatic changes in the industry over the past 30 or more years. Today, competitive forces are being relied upon more heavily to determine market structure and operation. However, this has not always been the case. Almost all aspects of the electricity industry were regulated at one point - a situation which led to tremendous difficulties in the industry.

Aruvian Research presents a comprehensive research report on the deregulation of the electricity industry worldwide in its report – Analyzing the Worldwide Deregulation of Electricity Markets. The report takes a look at the electricity industry deregulation in Europe, Asia, Asia Pacific, North America, South America, Africa & the Middle East. The report looks at each country in these regions and analyzes the electricity markets. The report tracks the market profiles, privatization and deregulation data, market regulation and the role of Independent Power Producers in some countries, and a lot more. Data on trade, production, consumption, etc., are also provided in the report.

Statistics, extensive figures and tables add to the comprehensiveness of this report.
