Abstracts

The COVID-19 pandemic has had quite an impact on the Chinese pharmaceutical and healthcare industry, through industry analysts expect a speedy recovery back to normal levels of demand. The Chinese pharmaceutical and healthcare industry is one of the largest markets in the world, and it is well on its way to becoming a leading global hub for drug innovation and drug development. Even as the COVID-19 crisis rages on, there is an increasing international investment in the Chinese pharma and healthcare sectors.

China's healthcare and pharmaceutical landscape is looking at promising new healthcare reforms in the coming years as the government looks to provide quality healthcare to its population's increasing demand. On March 5, 2021, the government announced institutional healthcare reforms in line with China's 14th Five Year Plan (2021-2025).

The government has also highlighted a detailed roadmap for enhancing the overall quality of healthcare in the country while also expanding the necessary services in this sector. With generic drugs being the mainstay of the country's population, generics accounted for nearly 65% of the overall pharmaceutical industry in 2020. While growth in the pharmaceutical industry is unlikely to return to pre-pandemic highs, China will continue to remain one of the biggest markets for drugmakers worldwide.

Aruvian Research presents an in-depth analysis of the Pharmaceutical and Healthcare Industry of China in its research report Pharmaceutical and Healthcare Industry in China – Forecast and Analysis 2021. The report covers the following data:
