Abstracts

Over the past decade, pharmaceutical companies have pushed the scientific envelope, working at the cellular and molecular levels to dramatically advance the treatment of disease.

Mexico's pharmaceutical policy environment is in a period of rapid evolution, with simultaneous policy development, refinement and ongoing implementation. This handicaps Mexico's efforts to achieve policy goals efficiently at the present time, and also makes policy assessment and even accurate description difficult.

Mexico, along with almost all OECD countries, has witnessed growth rates in health expenditures that have surpassed general rates of inflation and, as in many cases, a main driver has been spending on pharmaceuticals. Between 1999 and 2004, the real annual growth rate in pharmaceutical spending in Mexico was 8%, the fifth highest among the 24 OECD countries for which data were available for this period. Like most OECD countries, annual growth in pharmaceutical expenditures in Mexico was greater than that for total health spending (net of pharmaceutical spending), which was only 4.9% for this period.
