Abstracts

Aruvian Research's report Quantum Dot Solar Cells 2016 earmarks the immense potential that this technology holds for the future of mankind and the crucial impact it will have on the process of introduction of solar energy into large scale arenas of the industrialized economies. The report on Quantum Dot Solar Cells initiates with a strong theoretical understanding of the Solar Cell system and their subsequent propagation into photovoltaic systems including their applications derived from generational leaps as first to third generation cells. The research offering presents the entire gamut of PV cells in a structured family tree for easy interpretation and also delves into the applications of PV Technology in isolated environment.

Aruvian Research's report also devotes an entire in depth section to the technical aspects of Quantum Dot Solar Cell systems including their history as well as mechanism, general operation principles and the new innovations in architecture design of Quantum Dot Solar Cells which have opened up new markets for solar power systems. These are further explained in the efficient design choices of various configurations and new ideas contributed in this field.

The report further analyzes the processing techniques of Quantum Dot Solar Cells and a brief section is also dedicated to quantum dot solar concentrators. In order to address the efficiency factors which impact the Quantum Dot Solar Cells systems the report examines the application on nanostructures to this with a complete overview on the two major techniques in use today. An analysis is also presented of the leading companies making waves in this relatively new field of Quantum Dot Solar Cells.

Aruvian Research's presentation Quantum Dot Solar Cells 2016 is a very comprehensive tool for understanding this technology in a in depth manner and deliver thought provoking views on the marvels of this field which is nature's helping hand lent to mankind in order to preserve a way of life which is sustainable as well as in sync with

our environment.

Contents

A. EXECUTIVE SUMMARY

B. WHAT ARE QUANTUM DOTS?

- B.1 Overview of Quantum Dots
- B.2 Looking at Quantum Confined Semiconductors
- B.3 How to Make Quantum Dots
 - B.3.1 Synthesis of Colloidal Semiconductor Nanocrystals
 - B.3.2 Fabrication Process
 - B.3.3 Viral Assembly
 - B.3.4 Self-Assembly by Electrochemical Methods
 - B.3.5 Bulk Manufacturing
 - B.3.6 Problem with Cadmium-based Quantum Dots
- B.4 Looking at Optical Properties of Quantum Dots
- B.5 Application Areas of Quantum Dots
 - B.5.1 Overview
 - B.5.2 Uses in Biology
 - B.5.3 Uses in Quantum Computation
 - B.5.4 Role in Photovoltaics
 - B.5.5 Uses in Light Emitting Devices
- B.6 Endless Possibilities of Quantum Dots

C. INTRODUCTION TO PHOTOVOLTAICS

- C.1 Overview
- C.2 Historical Background of Solar Cells
- C.3 Looking at Solar Electricity
- C.4 Photovoltaic Systems
- C.5 Looking at the Balance of System (BOS)
- C.6 Analyzing the 3 Generations of Photovoltaic Cells
 - C.6.1 First Generation PV Cells
 - C.6.2 Second Generation PV Cells
 - C.6.3 Third Generation PV Cells
- C.7 What are Concentrator Cells?
- C.8 Analyzing Concentrated Photovoltaics
- C.9 Applications of Solar Cells
- C.10 Types of Solar Cells

- C.11 PV Technology in Isolated Generation
- C.12 Looking at Thin Film Solar Cells
- C.13 PV Family Tree – A Diagrammatic Representation

D. GLOBAL MARKET OVERVIEW OF SOLAR PV CELLS

- D.1 Market Profile
- D.2 Market Size
- D.3 Growth Patterns of the Market
- D.4 Market Statistics – Production Side
- D.5 Commercialization Potential & Market Development
- D.6 Future of the Market

E. ANALYSIS OF VARIOUS SOLAR CELL MATERIALS

- E.1 Silicon – Crystalline and Amorphous
- E.2 Thin Film Materials - CIS, CdTE, Dye Sensitized
- E.3 Organic Polymers
- E.4 Nanoscale Materials

F. ANALYZING THE PERFORMANCE METRICS & CHARACTERIZATION OF A PV CELL

G. HOW TO INCREASE THE EFFICIENCY OF SOLAR CELLS

- G.1 Overview
- G.2 Hot Carrier Cells
- G.3 Tandem Solar Cells
- G.4 Intermediate Band Solar Cells

H. LOOKING AT NANOCRYSTAL/QUANTUM DOT SOLAR CELLS

I. NANOSTRUCTURED SOLAR CELLS AND WIDE BAND GAP MATERIALS

J. HOW THE QUANTUM DOT ACHIEVES HIGHER EFFICIENCY

K. HOW THE MANUFACTURING PROCESS OF QUANTUM DOTS IS EVOLVED FOR SOLAR CELLS

L. INCREASING THE EFFICIENCY OF INORGANIC SOLAR CELLS WITH QUANTUM STRUCTURES

- L.1 Overview
- L.2 Superlattice and Multiple Quantum Well Systems
- L.3 Hot Carriers and Carrier Multiplication System
- L.4 Development of Protocrystalline Silicon Multilayer
- L.5 Development of Nanorod-shape Heterojunction

M. ANALYSIS OF QUANTUM STRUCTURED SOLAR CELLS

- M.1 Overview
- M.2 Looking at Multiple - Exciton Generation Solar Cells
- M.3 Looking at Intermediate - Band Solar Cells
- M.4 Looking at Electron–Hole Pair Multiplication in Quantum Dots
- M.5 Understanding the Interaction of Hot Carriers in Bulk Semiconductors
- M.6 Understanding Superlattices and Quantum Wells
- M.7 Determining Hot Electron Cooling Times
- M.8 Quantum Dots and Dynamics of Hot Excitons
- M.9 A Brief Look at the Phonon Bottleneck Phenomenon
- M.10 Historical R&D Data
- M.11 Formation of Multiple Electron–Hole Pairs in Quantum Dots
- M.12 Configurations of Quantum Dot Solar Cells
 - M.12.1 Photoelectrodes and Quantum Dot 3-D Array
 - M.12.2 Quantum Dots and Nanocrystalline TiO₂ Solar Cells
 - M.12.3 Quantum Dots and Organic Semiconductor Polymers
- M.13 Summing Up

N. ANALYZING QUANTUM DOT INTERMEDIATE BAND SOLAR CELLS

- N.1 Overview
- N.2 How to Design the Quantum Dot
- N.3 Coupling of Quantum Dot
- N.4 Process of Quantum Dot Doping

O. ANALYSIS OF QUANTUM DOT SOLAR CONCENTRATORS

- O.1 Overview
- O.2 What is the Quantum Dot Concentrator?

- O.3 Modeling of the Concentrator
- O.4 Looking at the 3-D Models
- O.5 Analysis of Results
- O.6 Summing Up

P. CASE STUDIES

- P.1 Manufacturing Multi-Stacked Quantum Dots in Higher Efficiency Solar Cells
- P.2 Developing a Silicon Quantum Dot Structure for Silicon Tandem Solar Cells

Q. LEADING INDUSTRY CONTRIBUTORS

- Q.1 Cyrium Technologies
- Q.2 E. I. du Pont de Nemours and Company
- Q.3 Kopin Corporation
- Q.4 NanoMas Technologies
- Q.5 Natcore Technology Inc.
- Q.6 Quantum PV
- Q.7 QuNano
- Q.8 Sol Voltaics
- Q.9 Solterra Renewable Technologies Inc
- Q.10 Voxtel

R. APPENDIX

- R.1 Using Tandem Solar Cells for Increased Efficiency
 - R.1.1 Overview
 - R.1.2 Design Considerations
 - R.1.3 Performance Characteristics
 - R.1.4 Fabrication of Tandem Solar Cells on Silicon
 - R.1.5 Facing the Challenge for High Conversion Efficiency
- R.2 Figures & Tables

S. GLOSSARY OF TERMS

List Of Figures

LIST OF FIGURES

- Figure 1: A Solar Cell Made from a Monocrystalline Silicon Wafer
- Figure 2: Installed PV Capacity by Technology in 2015
- Figure 3: Annual Market (MW) and Annual Growth Rate (%)
- Figure 4: Global PV Capacity Growth & Forecast
- Figure 5: Regional Breakdown of Global PV Markets
- Figure 6: Dye Sensitized Solar Cell
- Figure 7: Hybrid Nanorod-Polymer Solar Cell
- Figure 8: Electrical Model of a Solar Cell
- Figure 9: I-V Characteristics of an Ideal Solar Cell
- Figure 10: Multicolor Simulator
- Figure 11: Energy Relaxation of Carriers after a Short, High-Intensity Laser Pulse at $t =$
- Figure 12: Schematic of an IBSC
- Figure 13: Room-Temperature Photoluminescence Spectra and a 5 μ m Atomic Force Microscope Image from an Indium-Nitride Sample with a High Density of Dots
- Figure 14: Energy Band Structure of a Single Joint Type Solar Cell and the Main Energy Loss Factor
- Figure 15: Drawing of Quantum Dot Solar Battery Structure
- Figure 16: Quantum Dot Solar Battery Energy Band
- Figure 17: Mini Band
- Figure 18: Heat Processed Silicon Quantum Dot Structure
- Figure 19: High Resolution Transmission Electron Microscope Imaging of Nanoporous Silica
- Figure 20: Density of States (DOS) in the Semiconductors; (a) 0D (Quantum Dot), (b) 1D (Quantum Wire), (c) 2D (Quantum Well), and (d) 3D (Bulk)
- Figure 21: Energy Band Diagrams for p-i-n Type Single-Junction Solar Cells using MQW Absorber
- Figure 22: Energy Band Diagrams for p-i-n Type Single-Junction Solar Cells using SL Absorber
- Figure 23: Valence and Conduction Band Levels for Nanorod-shaped CdTe and CdSe Films
- Figure 24: Hot Carrier Relaxation/Cooling Dynamics in Semiconductors
- Figure 25: Enhanced PV Efficiency in QD Solar Cells by MEG (Inverse Auger Effect)
- Figure 26: Structure of an Intermediate Band Material, Showing the Possible Optical Transitions
- Figure 27: Difference in Electronic States between MQW Structures & Superlattices

Figure 28: 3-D plots of PL intensity versus time and photon energy
