Abstracts

South Africa is a world leader in mining. The country is internationally renowned for an abundance of mineral resources, accounting for a significant proportion of both world production and reserves, and South African mining companies dominate many sectors in the global industry. South Africa is the world's biggest producer of gold and platinum and one of the leading producers of base metals and coal. The country's diamond industry is the fourth-largest in the world, with only Botswana, Canada and Russia producing more diamonds each year.

It is estimated that South Africa holds 80% of the world's known manganese reserves as well as 72% of the world's known chromite ore reserves. South Africa is one of the top ten producers of aluminum, of alumino-silicates, chrome ore and ferro-chromium.

While holding the world's largest reserves of gold, platinum-group metals and manganese ore, the country has considerable potential for the discovery of other world-class deposits in areas yet to be exhaustively explored.

This research report from Aruvian Research – South African Metals and Mining Industry 2017 brings you an entire coverage of the metals and mining industry with a special focus on the diamond sector, the gold industry, and the platinum-group metals (PGM) in South Africa. The report also covers the major players in these sectors. Aruvian's report takes a look at the recent regulatory changes and how they are affecting the mining industry in South Africa.

Apart from the regulatory changes overall, the report also broadly covers the regulations affecting the diamond, gold and PGM sectors. The economics of mining, metal reserves, production of metals and minerals, production techniques, refining techniques, and a lot more technical data is also researched to satisfaction of any investor/researcher looking in to this particular sector.
