INTRODUCTION

As Chinese urbanization progressing, there are increasing demands on electron beam cable in microelectronics, appliances, automobile, aircraft, telecom, power grid, transportation, and construction realms, due to the features of electron beam cable, e.g. heat resisting, anti-reflection, climate ageing resisting, and cracking resisting.

In developed countries, there are rigid regulations on cable and wire from preventing toxic gas release when fire happened. Similar regulations published in some cities in China, consequently, adopting flame retardant low smoke e-beam cable become the major solution. It is predictable that more electron beam cables will adopted in construction, transportation, telecom, large scale power grids. The market potential of electron beam cable is large.
