Abstracts

It takes 3-5 business days to dispatch the report after the purchase is made.

Energy bars are supplemental bars containing cereals and other high energy foods targeted at people that require quick energy but do not have time for a meal. They are different from energy drinks, which contain caffeine, whereas bars provide food energy.

The market for bars is growing thanks to the public's demand for healthy foods. US bar sales are expected to increase from \$5.5 billion to \$6.2 billion between 2013 and 2018; driving this rise are consumers who are ever more aware of the link between smart food choices and improved health. Energy and nutrition bars continued to have only low sales in China, mainly due to limited product awareness. Sales are thus hindered by a small consumer base, with sales being strongest among young urban women, and by a small number of brands. There was also little marketing support for energy and nutrition bars towards the end of the review period, with only a few companies having a strong presence and investing little in advertising or educating consumers about energy and nutrition bars.
