Chinese friction welder investigation started since 1957; China was one of the countries early developed friction welding technologies. However, the final production and technology level are fall behind; it was insufficient to support Chinese development. In 2014, Chinese friction welders output scale was around 550 units, the valued was over ?230 million.

Friction welders are widely used in aerospace, nuclear power, weapon, automobile, utility industries, etc. AskCI predicts Chinese friction welder output will exceed over 800 in volume, and the valued would over ?350 million, by the end of 2020.
