1. INTRODUCTION

There are more than a dozen PVP manufacturers in China, and the total production output is more than 290,000 tonnes; in 2015, the consumption volume was about 20,700 tonnes. It can be seen from the statistics of production capacity and output that the actual PVP production capacity is already in the overcapacity state. At the same time, some China's products cannot reach the quality requirements of some industries, and nearly 20% of China's PVP consumption needs to be imported.

PVP has become one of the most important accessories for HIV medication manufacturing. In the future 3-6 years, the consumption of PVP will increase 500 tonnes 5,000 tonnes; the PVP is taking the place of formaldehyde in beer making process. ASKCI estimates, the demand volume of PVP will increase about 2,000 tonnes in oil development field.
