Abstracts

Sodium hydrosulfite common named insurance powder, has slightly special odor and strong reducibility. This powder is unstable and easily oxidized and resolve sulphur. Sodium hydrosulfite is affected with damp and will lose effectiveness exposed to the air, which may cause burning.

In China, Sodium hydrosulfite is mainly used in the field of textile printing and dyeing industry. The textile printing and dyeing industry are mainly distributed in the area of east China, therefore the distribution of market demand of Sodium hydrosulfite is basically in accordance with it. Currently, the market demand in south and east region accounts for 80% in the whole China market.

In the recent years, the main application fields of insurance powder demand has a rapid growth and the prosperity of this industry is improving. Owing to the finite production appliance, the price of insurance powder is elevated which accelerate the expansion of market size. At present, the market size is more than 5 billion RMB.

In the the next few years, the demand for insurance powder in textile printing and dyeing industry is steadily increasing. With the development of high-grade newsprint the potential market demand of insurance powder in the field of paper making will be increasing gradually. Besides, because of the big downstream demand of insurance powder as well as limited supply, and under the attraction of higher profit margins, there will has new enterprises to enter into this industry, while the existing enterprises are intending to expand.
