1. INTRODUCTION

According to the Membrane Industry Association Industry of China, there are around 600 companies specializing in membrane materials, components, and water treatment engineering in China. Only 10 of these companies are medium size or large manufacturing companies, and less than 10 companies have sales of over RMB100 million. Most of the products produced by domestic companies are applied in middle and low end market, while big engineering projects are dominated by global companies.

China has demonstrated strong demand for membrane materials. Take ultrafiltration membrane as an example, the industry has been developed for many years in China and takes up around 30% of the total market share. With new policy and regulation released, ultrafiltration membrane will witness rapid development and great opportunities in the coming years.

In this report, AskCI will further disclose market potential and commercial opportunities for ultrafiltration membrane in China. Recommendations will be given at the end of the report to describe the prospect and provide suggestions for strategy making.
