1. INTRODUCTION

Existing synthesis technology for diethyl oxalate has disadvantages of long production cycle and high consumption, which influences production efficiency. The synthesis of oxalic acid by CO coupling reaction is developed on the basis of atom economic reaction, not only friendly to the environment, but also increasing resource utilization efficiency. Future technology will only develop towards the environmentally-friendly direction, thus the synthesis of oxalic acid by CO coupling reaction will come into wide application.

Enterprises for producing diethyl oxalate determine their sales by production, in which large-scale enterprises have certain inventory. However, for characteristics of diethyl oxalate, the amount of inventories will not be large. For recent years, diethyl oxalate market in China tends to rise stably. In 2015, diethyl oxalate output was 45.3 thousand tonnes in China. The market scale was RMB630 million.

Because diethyl oxalate is mainly used for medicines, forecast of diethyl oxalate depends on middle body's output and development. It is predicted that, in 2021, the output of diethyl oxalate in China will break 85.3 thousand tonnes and the market scale will reach RMB1.3 billion.

In this report, AskCI will further disclose market potential and commercial opportunities for diethyl oxalate industry in China. Recommendations will be given at the end of the report to describe the prospect and provide suggestions for strategy making.
