On international market, connector industry is an industry with market globalization and work specialization characteristics. In connectors manufacturing industry, top connector manufactures who captured most market shares are come from Europe, America, Japan, and Taiwan.

As the function of electronic products becomes more diversified and design becomes modularized, electronic connector plays an increasingly important role in electronic products. With downstream markets such as automotive, computer, household appliance, etc. developed rapidly, the production power gradually concentrates in China.

According to ASKCI's prediction, global connectors market has entered a new industrial growth period since 2003; then the compound growth rate meet 4.55% in 2010. As the function of electronic products becomes more diversified and design becomes modularized, electronic connector plays an increasingly important role in electronic products. Benefit from the downstream markets such as automotive, computer, household appliance, etc. developed rapidly, China has become one of the oligarchs and has captured large proportion of market shares. The connector market year over year growth rate in China is in the leading place, far above the average growth rate in the international market.

For now, there are many electronic connector producers in China but most of them are small in size. However, by Chinese government's policies support and the global electronics industrial center shifts, China would plays more and more important role in

global electronics market.
