Stalk pellets is one of biomass fuels, which also include agricultural plant stalks, tree branches, livestock manure, energy crops and plants, industrial organic waste water, urban sewage and waste, etc. In 2016, the output of stalk pellets broke three million tonnes. For the last five years, the comprehensive utilization of crop stalks has been increased from 69% to 80%. The demand for stalk pellets was about 3.4 million tonnes.

Biomass energy in China begins to take shape. Stalks and other agricultural products to be processed for energy are equal to around 400 million tonnes standard coals in a year. From the view of energy structure, although biomass energy takes limited proportions, its potential is not limited. The demand for stalk pellets is predicted to break 8.2 million tonnes in 2022.

Along with the national promotion of biomass energy, stalk pellets are used in boilers and thermal energy of industrial and service enterprises. Besides, for that enterprises will pay more attention to environment protection, stalk pellets, as a kind of biomass energy that pollute less, will be more used in the future. In 2022, the market scale of stalk pellets will be close to RMB5.4 billion.
