Hollow aluminum strips are a necessary for manufacturing hollow glass as the quality of hollow aluminum strips have a direct effect on the usage of hollow glass, namely lifespan and thermal capabilities. Its main use is to hold two or more sheets of glass apart and effectively serve as a support.

Wanji Corporation is one of the main manufacturers of these parts and possesses a production capacity of XX tons per annum, a figure that represents XX% of the entire market. 90% of all hollow aluminum strip manufacturers are mostly located in Central, Eastern and Northern China. The total amount of hollow aluminum strips produced in China in 2018 was XX tons, a XX% growth over the previous year. The Chinese demand for the product amounted to a total of XX tons.

Changes in national policies have caused the market for aluminum strips to expand exponentially. Aluminum strips occupy an important position in the green building materials category in that they are both effective and possess a mature industry.

Continued innovations in production technology will eventually lead to the production of aluminum strips to increase at a speed of X%. It is expected that aluminum strip production will reach a total of XX tons by 2023.
