Executive Summary

According to Azoth Analytics research report, the Global Alzheimer Drugs Market was valued at USD 6537.0 Million in the year 2021.

Diabetes, obesity, heart diseases and high blood pressure (BP), in confluence with sedentary lifestyles, unhealthy dietary patterns and smoking, are some of the factors known to increase the chances of developing Alzheimer's disease. An increase in the prevalence of these ailments and lifestyle choices among the masses, coupled with the rising geriatric population, represents one of the key factors driving the market growth. Furthermore, the leading pharmaceutical companies are focusing on the development of drugs that prevent the disease and provide long-lasting improvements in cognitive functions.

In addition, the market growth is further supported by the expansion of telehealth services and the growing traction of online pharmacies. Telehealth can be defined as the remote delivery of clinical as well as non-clinical services through tele- and digital communication technologies. These platforms have enabled disease diagnosis and drug delivery in remote regions. Apart from this, various Alzheimer's drugs are presently under late-stage clinical trials, including Aducanumab and Solanezumab. The development of these drugs is anticipated to propel the market growth in the coming years.

Moreover, increasing prevalence of Alzheimer's disease is fueling the demand for Alzheimer's drugs which in turn is driving the global Alzheimer's drugs market. Also, rising R&D activities by pharmaceutical companies and research institutes for Alzheimer's effective therapy is expected to boost the global Alzheimer's drugs market.
