### **Executive Summary**

The Global Animal Nutrition Market was valued at USD 26.54 billion in the year 2020. In addition to being building blocks of body proteins, amino acids play a significant role in various important biochemical and metabolic processes in the cells of animals. So, from growth to production and reproduction, amino acids play a large part in the productivity of farm animals and can contribute significantly to the profitability of a farm. Therefore, this segment is the highest growing among all other segments.

Asia pacific region is anticipated to grow enormously in the market on account of growing population in addition to rapid urbanization in emerging nations of Asia Pacific region, backing the growth in the market. Countries such as India, China and Japan present lucrative market for Animal Nutrition.
