In addition, rising geriatric population, increasing global healthcare expenditure and technological advancements in pharmaceuticals research, growing scope in developing countries with large population such as China and India is anticipated to impel the market growth of the antifungal drugs market. However, growing portfolio of antifungal generic drugs, patent expiration of innovator drugs, increasing prevalence of fungal resistance, and counterfeit drugs are expected to hinder the market performance during forecasted period.

In this research report, the market is segmented on the basis of drug class and therapeutic indications. By drug class, the azoles class antifungals are predicted to hold their dominant position in the market. By therapeutic indications, drugs use in the treatment of candidiasis are anticipated to create their dominance in global antifungal drugs market. Amongst the regions, North America accounts for the largest regional share in the global antifungal drugs market in 2017.
