Executive Summary

The Global Beef Market was valued at USD 323.45 Billion in the year 2020. Beef is becoming more popular as people look for higher protein and low-fat substitutes for a healthier lifestyle. The market is driven by improved living standards, higher disposable income and rapid expansion of middle-income consumers, thus driving the global market for beef. The rising population has resulted in a transition in recent years, in association with spending income on higher-value food items like meat protein has resulted in rising consumption of beef.

Based on Cut, the market is segmented into Brisket, Loin, Others. The other cuts segment holds a major share in the global beef market with a significant revenue share in 2020, mainly due to higher demand for shank, ribs, round, chuck, plate, and flank of beef. Moreover, the growing demand for grass-fed brisket is rising because it has low-fat content and has fewer calories than normal beef.

Americas is expected to hold the largest market share in the Global Beef market in 2026. This can be attributed to the United States, Canada and Brazil being the major beef producers, importing beef across the globe. The region will hold the dominant share in the forecast period, due to surging demand for processed beef.

However, the demand for nutritious meat is predicted to grow in tandem with rising meat

consumption in the coming years. This growing trend of protein consumption is expected to present several opportunities for various meat processors and food companies to invest in the beef industry, which has higher protein value than other poultry and meat food.
