## **Abstracts**

### **Executive Summary**

The Global Crop Nutrition Market, valued at USD 341.41 Billion in the year 2020 has been witnessing unprecedented growth in the last few years on the back of growing consumer demand for sustainable food, growing global population, growing need for an increase in yield and crop quality and rising adoption of digitalisation in agriculture.

Among the types of nutrients (Macronutrients and Micronutrients), Macronutrients is a large segment globally and is expected to grow steadily in the forecast period. The need for macronutrients for crop health is higher as compared to micronutrients, also, the macronutrients are widely used essential nutrients, which will drive the market.

Among the Application Method (Soil, Foliar, Fertigation, Other Applications), Soil holds a large share in the market globally and is expected to keep growing in the forecast period. It is one of the largest application methods as the soil is the most common and most efficient way to provide nutrition to crops, and as it will always be the best method that will keep driving the market in future.

Among Product Type (Fertilizer, Soil amendments, others), Fertilizers holds a large share in the market globally and is expected to keep growing in the forecast period. It is one of the largest product types of Crop Nutrition Market due to the high demand for fertilizers and widely usage of fertilizers to provide crop nutrition.

The main growth in Crop Nutrition Market has been registered from APAC in 2020. The presence of leading crop producers like China and India, with a growing population and need for increased food supply, drives the need for crop nutrients for crop quality and is expected to infuse market growth tremendously.
