Executive Summary

The Global Cyber Security Market was valued at USD 171.05 billion in the year 2020. The power and threat of malware, including viruses and Trojans, to infiltrate, manipulate, or damage entire electronic information networks have increased significantly. Cyber attackers often use malware to take control of devices or machines to generate financial gain. Internet security is also gaining traction due to increase in cyber-crimes across various industries. Moreover, during the COVID-19 pandemic, the incidence of malware attack on database of large organizations has increased, which creates need to strengthen the security of data base, thus boosting the cyber security market growth, globally.

Based on End User, the market is segmented into Government & Defense, IT & Telecom, BFSI, Retail, Healthcare and Others. The BFSI segment is expected to grow at a higher CAGR during the forecast period with Government and Defense being the largest end-user in 2020, representing about 25.70% of the Cyber Security market.

North America holds the maximum share in the global Cyber Security Market in 2020. During the forecast period, APAC is set to be the fastest-growing regional market. Furthermore, APAC is seeing great growth as a result of a variety of factors, including

the rise of IoT devices and government programs aimed at advanced technical breakthroughs. Some countries in the region, such as China and Japan are rapidly deploying cyber security technologies.

By 2026, the Wireless security will be the key with the prevention of unwanted users from accessing a particular wireless network. Wireless security helps in detecting, alerting, and preventing wireless networks and sends an alarm to the network administrator in case of any security breach.
