Executive Summary

The Global Endoscopes or endoscopy devices market is projected to display a significant growth represented by a CAGR of 6.50% during 2021 - 2026. The global Endoscopes market was valued at USD 10.97 billion in the year 2020 with North America region leading the regional market share. Increasing preference for minimally invasive surgeries, rising prevalence of chronic diseases (cancer, heart diseases, gastrointestinal diseases), aging population, increasing healthcare expenditure and introduction of new endoscopic products are the major factors that are expected to boost the demand of endoscopes in the region. Meanwhile, the demand in developed economies is already really high and the future growth is going to remain quite significant.

However, the Asia Pacific region is expected to witness lucrative growth over the forecast period owing to high demand for endoscopic procedures along with improving healthcare infrastructure that will drive the market for Endoscopes in the forthcoming years. Intense competition among endoscopes makers exists due to the increasing demand for endoscopes for various diagnostic and therapeutic procedures, coupled with technological advances. Increasing market demand is likely to encourage entry of new companies in the future, driven by the increasing awareness and acceptance of endoscopes and related technologies.

The COVID-19 is an incomparable global public health emergency that has affected almost every industry, including the endoscopes, non-urgent surgical care and other healthcare industries in multiple ways. The COVID-19 episode has disrupted the market of Endoscopes in different nations because of lockdowns, travel boycotts, and implementation of stay-at-home orders. The highly infectious nature, hospitalization and mortality rates associated with COVID-19 has impacted clinical care for many life-threatening conditions and has quite naturally postponed many non-urgent surgical or endoscopic procedures in order to minimize the risk of infection and to compliance with various governmental orders. As, the healthcare resources, including the surgical and endoscopy centers were deviated towards Covid care.

Rising prevalence of chronic diseases, increasing adoption of endoscopes for treatment and diagnosis, and technological advancements leading to enhanced applications of endoscopes. Furthermore, the growing preference for minimally-invasive surgeries over traditional/open surgeries are driving the utilization of various endoscopic procedures for diagnosis, such as gastrointestinal endoscopy, laparoscopy, arthroscopy, cystoscopy etc. These factors, in turn, are projected to fuel the demand for Endoscopes over the coming years.

One of the global leaders in medical devices industry, Olympus Corporation has focused on endoscopes innovation and some strategic M&A activity. For instance, in 2020, the company announced their U.S. FDA approved new and most advanced endoscopy system EVIS X1, it will improve outcomes from disorders of the stomach, colon, and oesophagus, as well as from bronchial diseases, by providing every endoscopists with innovative and proven tools worldwide. Alongside, in 2021, the company acquired Quest Photonic Devices B.V. (Netherlands) to strengthen its surgical endoscope business and add abdominal surgical instruments to its portfolio.
