## **Abstracts**

### **EXECUTIVE SUMMARY**

The Global HDPE Pipes Market was valued at USD 17,317.50 Million in the year 2019. Growing demand for HDPE pipes for water irrigation systems in agriculture industry coupled with rising sewage disposal infrastructure development across the globe is expected to fuel the demand for HDPE pipes during the forecast period. Additionally, the rise in agricultural and industrial activities and demand for pipeline infrastructure is increasing in oil & gas exploration and production activities which is anticipated to drive the growth of the global HDPE pipes market.

Most of the projects in China, the US, Germany and South Korea are delayed, and the companies are facing short-term operational issues due to supply chain constraints and lack of site access due to the COVID-19 outbreak. Asia-Pacific is anticipated to get highly affected by the spread of the COVID-19 due to the effect of the pandemic in China, Japan, and India.

Plastic pipes and tubes are widely used to supply gases and liquids of all types. Plastics may be preferred over metal due to inherent advantages. They are lighter weight, do not require open flame to join, and they're flexible, which can simplify installation and reduce breaks due to freezing.

The Asia Pacific region is forecasted to grow with a higher CAGR owing to the rapid

increase in urbanization, continuous industrial as well as residential construction, and infrastructure development in the region. Additionally, demand for oil and gas exploration and production activities is expected to propel market demand. The region has also witnessed rise in agricultural and industrial activities.
