Executive Summary

The Global MRI Systems Market was valued at USD 7.13 Billion in the year 2020. The rising prevalence of chronic diseases, technological advancements in the field strength of MRI Systems, and the rising geriatric population will impel the usage of MRI Systems globally, hence, paving way for the growth in the market during the forecast period 2021-2026.

Based on the Field Strength segment, the 1.5T – 3T captured the lion's share in the global market in 2020. Globally, MRI diagnosis takes place with scanners of either of these strengths. The more than 3T field MRI systems are increasingly becoming popular due to their improvements in imaging quality over other scanners.

North America region is estimated to hold the maximum share in the global MRI Systems market, followed by Europe. However, the new emerging markets in the APAC region will witness the fastest growth rate in the forthcoming years.

The key factors driving the growth of this market include rising prevalence of chronic diseases such as cardiovascular diseases, breast cancer, neurological and musculoskeletal conditions among others, awareness about the benefits of early diagnosis, technological advancements leading to the replacement of low-field MRI systems with high-field MRI systems, and rising aged population worldwide. The other

factors propelling the growth of the magnetic resonance imaging market are rising adoption of universal health coverage in the developed and developing markets, increasing product launches, adoption of high strength MRI equipment, rising healthcare infrastructure in emerging potential markets and advent of AI-Inspired MRI procedures.
