Executive Summary

The Global Pest Control market was valued at USD 20335.23 Million in the year 2020 with North America region leading the regional market share.

Growing economic activities, population increase, and the consequences of insects, together with pest intolerance, are all driving market growth. The growth in demand for pest management services around the world is being fuelled in part by climate change with an upsurge in fly-borne diseases likely to follow. In order to avert the worst-case situation, pest control services are projected to become more popular among consumers.

The COVID-19 pandemic is an incomparable global public health emergency that has affected almost every industry. The long-term effects are projected to impact almost all industries growth during the forecast period. The pandemic is likely to increase the awareness and policing of the potential for viruses and disease to be brought into any establishment, including the office network, and someone should not be surprised to see further legislation and the potential for fines if companies are found wanting. The performance of the Pest Control services is expected to see further improvement via increased customer focus and new product development in areas such as air purification. Rapid urbanization along with an increasing global population is likely to drive the demand for buildings and infrastructure. As per World Population Prospects

2017, United Nations, the global population is projected to reach 8.6 billion in 2030 and 1.2 billion more by 2050. This, in turn, is projected to fuel the demand for Pest Control over the coming years.

While Rentokil is focused on its Lumnia insect light traps, Rollins made 31 and 30 acquisitions during the years ended December 31, 2020, and 2019, respectively. Rollins acquired Clark Pest Control in 2019 and it is the largest Rollins acquisition since the company acquired HomeTeam Pest Defense in 2008.
