EXECUTIVE SUMMARY

The Global Petroleum Refining Products was valued at USD 6746.37 Million in the year 2019 and has volume of 98272 thousand barrels/day in the same year. The growth in refining capacity is mainly driven by the demand of petro-products in a region and runs parallel with the growth of human and vehicle population. A population of around 8.1 billion and more than 100 million vehicles on roads are expected by 2025.

Capacity expansion of existing refineries and setting-up of brown-field and green-field petroleum refineries are projected to be key factors boosting the demand for refined petroleum products market during the forecast period.

Increasing investment toward the refurbishment, upgradation and expansion of existing refinery facilities will propel the oil refining market growth. For instance, in April 2018, Saudi Aramco announced an investment of USD 44 billion to construct integrated refinery and petrochemical complex in India. Rising concern to reduce the dependency on import of petroleum product will further escalate the industry share.

Asia Pacific holds the major Petroleum Refining Products share and is expected to remain the major consuming region during the forecast period, with upcoming refinery projects in China and India.
