EXECUTIVE SUMMARY

A comprehensive research report created through extensive primary research (inputs from industry experts, companies, stakeholders) and secondary research, the report aims to present the analysis of Global Polyethylene Wax Market; By Type (High Density PE Wax, Low Density PE Wax, Oxidized PE Wax and Others), By End User Industry (Plastics & Elastomers, Paint & Coating, Textile, Printing Ink and Others), By Region (North America, Europe, Asia Pacific, ROW) and By Country (U.S., Canada, Mexico, Germany, U.K., China, India, Japan, Brazil and Saudi Arabia)

Introduction of polyethylene waxes in the market uncovered a series of new applications and initiated the necessity of detailed recognition of their properties. Polyethylene wax is manufactured by polymerization of ethylene, a derivative of crude oil. The process of polymerization of ethylene is significant as level of polymerization affects the physical properties of polyethylene wax.

PE Wax is polyethylene homopolymer wax, applied as a consistent ingredient for end formulations to improve product appearance and high thermal properties for a wide range of industries, including PVC, colour masterbatches, rubber and textiles. Global PE wax manufacturers have established several polymerization processes to produce wax with desired properties. Moreover, addition of polyethylene wax to hydrocarbon waxes increases the melting points to a marked degree.

According to Azoth Analytics research report, “Global Polyethylene Wax (PE Wax) Market: Analysis By Type, By End User Industry, By Region, By Country: Opportunities and Forecast (2017-2022) - By Type (High Density, PE Wax, Oxidized, Others), By End User Industry (Plastics & Elastomers, Paint & Coating, Textile, Printing Ink), By Region (North America, Europe, Asia Pacific, ROW), By Country (U.S., Canada, Mexico, Germany, U.K., China, India, Japan, Brazil, Saudi Arabia)”, global PE wax market is projected to display a good growth of over 4.75% during 2017 – 2022, chiefly driven by increasing demand from high-growth industries like plastics, coating and textiles, coupled with the rising disposable income and industrialisation in the emerging economies.

Over the next five years, demand growth for oxidized polyethylene wax is expected to exhibit the maximum advancement, owing to high applicability in varied end-user sectors. Oxidized PE wax are increasingly being used in PVC processing, water-based wax emulsions and nonionic emulsions in several high-end manufacturing sectors including textile industry, paper coating, packaging and adhesives. Among the regions, Asia Pacific accounts for the largest regional share of around 40%, in the total market in 2016, and is predicted to advance at the highest rate, owing to the soaring growth in automotive and construction sectors, economic development and rising consumer demand.
