## **Abstracts**

### **EXECUTIVE SUMMARY**

The Global Renewable Diesel Market, valued at USD 19.15 Billion in the year 2019 has been witnessing unprecedented growth in the last few years on the back of growing demand of clean energy and Government policies to promote renewable diesel. Additionally, growing demand of biofuel, availability of feedstock will drive the renewable diesel market value in the near future. Renewable diesel being chemically identical to diesel and its characteristic to be used in the existing diesel infrastructure makes it one of the potential fuels in the global market. Also, it is one of the most viable carbon reduction alternatives to other fuel sources.

Among the Feedstock in the Renewable Diesel market (Vegetable Oil, Animal Fat and Others), Vegetable oil has popularity globally and is expected to keep growing in the forecast period. The importance of availability of vegetable oil feedstock will drive the market.

Among the End User of the Renewable Diesel market (Transportation, Industrial and Others), Transportation Sector is very popular globally and is expected to keep growing in the forecast period. The Transportation sector is one of the largest consumers of diesel and demand of biofuel across globe which will keep increasing in future.

The American market is expected to lead the global market throughout the forecasted period. The increasing government policies to promote renewable diesel and rising

spending in R&D are expected to infuse market growth tremendously.
