With increased focus on environment protection, the reverse vending machine market is likely to witness strong growth in coming years. Further, increasing demand for the recycling projects expected to drive the market growth over the forecasted period.

Businesses and governments across the world are looking for the best way of reusing plastic water bottles, with the deposit return scheme already making an impact in about 20 countries. Additionally, with alarming growth in plastic pollution worldwide, and particular concern over waste from single-use beverage containers, the recycling space is driving forward new innovations to make returning bottles and cans more motivating and efficient.

Europe region holds the major Reverse Vending Machine market share. Innovation and development of resource recycling projects has led to the increasing demand for reverse vending machine. With increased focus on environment protection, the reverse vending machine market is likely to witness a strong growth in coming years.

On the basis of End User, Supermarkets are the major end users of reverse vending machine. During the recent time, use of Reverse Vending Machine (RVM) is increasing day by day. Reverse Vending Machine gains popularity in those country where recycling laws or legislation is required.

On the basis of type, Non-refillable machine types are prominent segment accounting for majority of the global market share. The growth of the market is attributed to an increase in demand for convenience products, rising threats to the environment from non-decomposable waste bottles, and rising inclination of people towards a healthy lifestyle.
