EXECUTIVE SUMMARY

The Global Specialty Cellulose Market valued at USD 1980.85 Million in the year 2019 By value and 1646.67 thousand tonnes By volume has been witnessing unprecedented growth. The market for the Specialty Cellulose has been growing because the specialty cellulose generally command a price premium and earn higher margins relative to other commodity wood pulp products. Specialty Cellulose develops, produces and sells cellulose mainly for use in the production of cellulose acetate, cellulose ethers and other specialty segments. Specialty cellulose (characterized by a purity of 95% alpha-cellulose or greater) requires an immense amount of technical expertise to produce most of the world's specialty cellulose that is being manufactured by just a handful of companies. But in the current year 2020, due to the covid-19 impact, Cellulose Specialties volume has been weakened because spread of the virus has restricted logistics and slowed recovery of downstream market as a result, inventory of the finished goods in the companies kept on increasing and is expected to touch a record high.

Among the Product segment in the Specialty Cellulose market (Acetate, Ethers, Nitrocellulose and Other Specialties), Acetate segment has been gaining popularity among other segments and is expected to keep major market share in the forecast period. Rising demand for cellulose acetate owing to increasing demand for eco-friendly, biodegradable, cost-efficient, and versatile cellulose acetate, is a major factor

expected to drive growth of the global cellulose acetate market over the forecast period. In addition, increasing demand for cellulose from the textile & apparel industry is another factor anticipated to fuel growth of the target market in the next coming years.

Based on Application (Food & Beverages, Pharmaceutical, Construction, Textile, Cigarette Filter and Others), Textile Segment dominates the market share in year 2019 and is also expected to show dominance during the forecast period. Growing demand for specialty cellulose due to short fall of cotton supply coupled with increasing application scope in making clothes, home furnishings, and non-woven products is the key factor to drive the specialty cellulose market.

The Asia Pacific market is estimated to be the leading market for Specialty Cellulose during the forecast period. The Asia-Pacific accounted for the largest market share owing to the fastest-growing textile industry and growing residential and commercial construction in the region.
