## **Abstracts**

### Executive Summary

The global Surgical Eye Care market was valued at USD 10.26 Billion in the year 2020 with North America leading the regional market share. Increasing prevalence of eye-related diseases, geriatric population, adoption of new technologies in lower-income countries, ageing population and high demand for diagnostic procedures is expected to boost the demand of Surgical Eye Care.

Meanwhile, the demand in developed economies is already high and the future growth is going to remain quite stable. However, the emerging economies will drive the market for surgical eye care in the forthcoming years. Companies are expected to boost innovation and development of various eye implants and equipment to make them more sustainable in the global market with Asia-Pacific holding huge unmet need for surgical eye care.

Rising prevalence of eye-related diseases such as glaucoma, cataract, diabetic retinopathy, refractive errors and others is likely to drive the demand for eye surgeries and implants. Further, in the last few years, it has been observed that the visits to medical institutions for eye care diagnosis has continuously increased. Increase in per capita income and prevention from the severity of eye disorders are the main reasons behind the rise. Further, the development of advanced products such as advances in laser technology and noninvasive cosmetic surgeries along with growing awareness

about the safety of these procedures provide numerous opportunities for the market growth in future.

In recent years, Alcon has focused on surgical eye innovations and some strategic M&A activity. In 2021, Alcon got FDA approval to launch their Trifocal Intraocular Lens (IOL), the first and only trifocal lens for U.S. patients undergoing cataract surgery.
