EXECUTIVE SUMMARY

The Global Testing, Inspection & Certification Market, valued at USD 265.85 billion in the year 2019 has been witnessing unprecedented growth in the last few years on the back of mergers and acquisitions that drives solid development for players and supports mid-level TIC organizations. Also, the positive outlook of Testing, Inspection & Certification industry can be credited to variables, such as strong GDP development in the BRIC nations, an expanding drive to uphold guidelines by governments, global exchange items and administrations and move towards industry standardization because of better, progressively dependable and more secure products with expanding end-client awareness connecting a safe business with a productive business.

Among the Service segment in the Testing, Inspection & Certification market (Testing, Inspection, Certification), Testing Service has been gaining popularity among various end-user segments and is expected to keep major market share in the forecast period owing to rising globalization, which has additionally encouraged the development in worldwide sourcing. These worldwide global sourcing practices have expanded the interest for testing services because of the presence of various item benchmarks across various areas.

Based on Source Type segment, In-house segment dominates the market share in year 2019 and is also expected to show dominance during the forecast period because In-house testing administrations give organizations unlimited authority over the whole

procedure.

Based on Application segment, Consumer Goods & Retail holds the major share in the TIC market followed by Food & Agriculture, Oil & Gas and Petroleum segment. This growth in application is driven by the expanding requirement for TIC benefits in personal care and beauty products, hard products, softlines and accessories, toys and adolescent items, and electrical and hardware, among others.

The European region has the largest market in year 2019 while it is estimated that Asia Pacific will show the fastest growth during the forecast period with China being the leading country in the region followed by India. Factors backing the growth of the region are growing consumer awareness coupled with increasing government norms for the safety and quality of the products that are being consumed.
