Abstracts

Fertilizer market development is mainly driven by micronutrients deficiency in soil. Moreover, the growth of the population leads to the increased cereals demand. Industrialization, which results in the shortage of agriculture lands, requires more productivity.

Boron is an essential element for crop yielding, plants growth and seed development. The boron compounds are utilized in fertilizers and are also used as algaecides, herbicides and other pesticides.

Most used boron fertilizers today are borax (sodium tetraborate pentahydrate) and sodium tetraborate. Solubor (disodium octaborate tetrahydrate) and boric acid also serve as boron sources for plants.

The global agricultural micronutrients market is led by APAC. The other largest manufacturers include Europe and North America.
