Abstracts

Nowadays the global production of scandium is less than 10 tons. The main part is produced by ex-Soviet republics: Russia, Ukraine and Kazakhstan.

Australia, Russia, China, Kazakhstan, USA, Ukraine, Madagascar, and Norway possess the most significant scandium resources in the world. Scandium is produced usually as a co-product in ore processing. The main application is scandium-aluminum alloys production. It is also used in metal halide lighting manufacturing.

Russia exports scandium to foreign countries, especially Europe and USA. Scandium consumption is projected to grow, that's why some deposits will be developed in future. Nowadays there are some perspective projects in Europe, Australia and China to develop scandium mining.

Scandium is an expensive type of metal. Current price varies from 2000\$ to 6000\$, depending on purity and quantity.
