## Abstracts

Animal Health International, Inc. Fundamental Company Report provides a complete overview of the company's affairs. All available data is presented in a comprehensive and easily accessed format. The report includes financial and SWOT information, industry analysis, opinions, estimates, plus annual and quarterly forecasts made by stock market experts. The report also enables direct comparison to be made between Animal Health International, Inc. and its competitors. This provides our Clients with a clear understanding of Animal Health International, Inc. position in the [Healthcare Industry](#).

The report contains detailed information about Animal Health International, Inc. that gives an unrivalled in-depth knowledge about internal business-environment of the company: data about the owners, senior executives, locations, subsidiaries, markets, products, and company history.

Another part of the report is a SWOT-analysis carried out for Animal Health International, Inc.. It involves specifying the objective of the company's business and identifies the different factors that are favorable and unfavorable to achieving that objective. SWOT-analysis helps to understand company's strengths, weaknesses, opportunities, and possible threats against it.

The Animal Health International, Inc. financial analysis covers the income statement and ratio trend-charts with balance sheets and cash flows presented on an annual and quarterly basis. The report outlines the main financial ratios

pertaining to profitability, margin analysis, asset turnover, credit ratios, and company's long-term solvency. This sort of company's information will assist and strengthen your company's decision-making processes.

In the part that describes Animal Health International, Inc. competitors and the industry in whole, the information about company's financial ratios is compared to those of its competitors and to the industry. The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.

Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of Animal Health International, Inc. business.

### **About Animal Health International, Inc.**

Animal Health International, Inc. distributes animal health products in the United States and Canada.

#### **Products**

The company offers a selection of approximately 40,000 animal health products, including proprietary branded products, which it sources from approximately 1,500 manufacturers. The company also offers its customers additional products through special orders. Its products comprise four major categories: pharmaceuticals, biologicals, pet foods and nutritional products, and other products.

**Pharmaceuticals:** Pharmaceuticals include dosage form medicines employed in disease prevention and treatment programs. Pharmaceuticals, such as antibiotics, anthelmintics, insecticides, and implants include both over-the-counter products, which can be sold directly to end-users, and ethical products, which are sold to, or through, veterinarians.

Antibiotics are administered for the treatment and prevention of diseases, such as chronic respiratory disease and for growth promotion. Antibiotics include products, such

as tetracyclines, penicillins, erythromycins, cephalosporins, and fluroquinolones. Antibiotics are available in injectable, bolus (pill), additive, and drench (liquid) forms.

Anthelmintics are deworming agents administered on a routine basis to animals for the prevention and treatment of internal parasites and worms in production animals. Worms include gastrointestinal roundworms, stomach worms, intestinal worms and lungworms. Anthelmintics are available in injectable, bolus, drench, additive, pour-on, and paste forms.

Insecticides are used to control insect populations on animals and their premises, and are administered on a routine, preventative basis. Insecticides can be used to control flies, lice, ticks, mites and fleas, and are available in dust, liquid, spray, and ear tag forms. Endectocides are active against both internal and external parasites and hence are both an anthelmintic and an insecticide.

Implants are used for the promotion of growth in animals, to increase weight gain and improve yield in cattle.

Biologicals: Biologicals, including bacterial and viral vaccines and antitoxins, stimulate immunity to disease in both production and companion animals. Bacterial vaccines are bacterial products that are used on a routine basis to prevent diseases, such as black leg, leptospirosis, red water, and shipping fever. Viral vaccines are used for the control of respiratory and gastrointestinal diseases. Antitoxins provide short-term protection for certain soil borne and certain other infections, such as tetanus.

Pet foods, and nutritional products, including medicated feed additives. The company offers various pet foods and nutritional products, such as dietary supplements, probiotics (i.e. beneficial bacteria-based treatments), vitamins and treats, to veterinarians and retail stores. Medicated additives include regulated products, such as antibiotics and anti-bacterials, and are used at low levels to promote growth in production animals and, at high levels, for therapeutic treatment.

Other products, including diagnostics, capital equipment, medical devices and supplies, chemicals, calf feeding bottles, and dairy lagoon treatment systems: The company offers a range of diagnostics, capital equipment and medical devices and supplies, including disposable kits, replacement strips and reagents. These products are used for testing various animal species' body fluids and tissue for disease and/or conditions or in residue testing of animal products. While heartworm diagnostics are at the core of this market, other products also include a range of blood tests for disorders, such as

ehrlichia, feline leukemia, parvovirus, feline infectious peritonitis, and feline immunodeficiency virus. Medical supplies are used in cleaning and sanitizing equipment and facilities, as well as diagnostic and suture components, and grooming products, such as brushes and shampoos. Chemicals include sanitizers, cleaning agents, disinfectants, insecticides, and rodenticides, and are typically used by production animal producers.

Proprietary branded products: In addition to the four major categories of products, the c

The above Company Fundamental Report is a half-ready report and contents are subject to change.

It means that we have all necessary data in our database to prepare the report but need **2-3 days** to complete it. During this time we are also updating the report with respect to the current moment. So, you can get all the most recent data available for the same price. Please note that preparation of additional types of analyses requires extra time.

## ANALYSIS FEATURES

### SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

### Enhanced SWOT Analysis

Enhanced SWOT is a 3x3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

### PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

## Key Factors Examined by PESTEL Analysis:

**Political** – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

**Economic** – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

**Sociological** – What cultural and societal aspects will work upon the demand for the business's products and operations?

**Technological** – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

**Environmental** – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

**Legal** – What laws and legislation will exert influence on the style the business is carried out?

## **IFE, EFE, IE Matrices**

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

### **Porter Five Forces Analysis**

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

### **VRIO Analysis**

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

## Reputation

### Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?

Rare?

Costly to imitate?

Organized properly?
