It involves specifying the objective of the company's business and identifies the different factors that are favorable and unfavorable to achieving that objective. SWOT-analysis helps to understand company's strengths, weaknesses, opportunities, and possible threats against it.

The Applied Industrial Technologies, Inc. financial analysis covers the income statement and ratio trend-charts with balance sheets and cash flows presented on an annual and quarterly basis. The report outlines the main financial ratios

pertaining to profitability, margin analysis, asset turnover, credit ratios, and company's long-term solvency. This sort of company's information will assist and strengthen your company's decision-making processes.

In the part that describes Applied Industrial Technologies, Inc. competitors and the industry in whole, the information about company's financial ratios is compared to those of its competitors and to the industry. The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.

Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of Applied Industrial Technologies, Inc. business.

About Applied Industrial Technologies, Inc.

Applied Industrial Technologies, Inc. distributes industrial products in North America.

Segments

The company operates in two segments, Service Center-Based Distribution Segment and Fluid Power Businesses Segment.

Service Center-Based Distribution Segment

The Service Center-Based Distribution segment distributes a range of industrial products through service centers across North America. The company's customers primarily purchase its products for scheduled maintenance of their machinery and equipment and for emergency repairs. In addition, it operates regional fabricated rubber shops, which modify and repair conveyor belts and make hose assemblies in accordance with customer requirements, and rubber service field crews, which install and repair belts and rubber linings at customer locations. The business operates in the United States using the Applied Industrial Technologies trade name. The company is

also known as Bearing & Transmission and Groupe GLM in Canada; Applied Mexico in Mexico; and Rafael Benitez Carrillo in Puerto Rico.

Fluid Power Businesses Segment

The Fluid Power Businesses segment consists of specialized regional companies that distribute fluid power components and operate shops to assemble fluid power systems and perform equipment repair. The company's specialized fluid power businesses primarily market products and services to customers within the businesses' geographic regions. In the United States, the businesses also market products and services through its service center network. In addition to distributing fluid power components, the businesses assemble fluid power systems, perform equipment repair, and offer technical advice to customers. Its customers include firms purchasing for maintenance, repair, and operations needs, as well as for original equipment manufacturing applications.

Products and Services

Products

The company distributes bearings, power transmission components, fluid power components and systems, industrial rubber products, linear motion components, tools, safety products, and general maintenance, and mill supply products. Its fluid power products include hydraulic, pneumatic, lubrication, and filtration components and systems.

Services

The company's associates advise and assist customers in selecting and applying products, and in managing inventory. It offers product and process solutions involving multiple technologies. Its service center sales associates include customer sales and service representatives and account managers, as well as product and industry specialists. Customer sales and service representatives receive, process, and expedite customer orders, provide product information, and assist account managers in serving customers. Account managers make on-site calls to customers to provide product information, identify customer requirements, make recommendations, and assist in implementing equipment maintenance and storeroom management programs, as well as automated dispensing systems. Product and industry specialists assist with applications in their areas of expertise.

The company supplements the service center product offering with its MaintenancePro fee-based technical training seminars. These courses provide customer personnel with information on maintenance, troubleshooting, component application, and failure analysis in the areas of hydraulics and pneumatics, lubrication, bearings, and power transmission.

In addition to distributing products, the company offers shop services in select geographic areas. Its fabricated rubber shops modify and repair conveyor belts and provide hose assemblies (also available at select service centers and distribution centers) in accordance with customer requirements. Field crews install and repair belts and rubber lining, primarily at customer locations. Among the other services the company offers, either performed by the company directly or by third party providers, are the rebuilding or assembly of speed reducers, pumps, valves, cylinders, electric and hydraulic motors, and custom machining.

Markets

The company purchases from approximately 2,000 product manufacturers and resells the products to customers in various industries, including agriculture and food processing, automotive, chemical processing, forest products, industrial machinery and equipment, mining, primary metals, transportation, and utilities, as well as to government agencies.

Acquisitions

In July 2010, the company acquired UZ Engineered Products, a distributor of fasteners, fittings, lubricants, electrical components, welding supplies, cutting tools, and other specialty maintenance items to government and industrial customers in the United States and Canada. The business operates from one location in Cleveland, Ohio.

In August 2010, the company acquired SCS Supply Group, a distributor of bearings, mechanical and electrical power transmission components, fluid power components, and industrial supplies, serving a mix of customers from eight locations in Ontario, Canada.

History

Applied Industrial Technologies, Inc. was founded in 1923.

ANALYSIS FEATURES

SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

Enhanced SWOT Analysis

Enhanced SWOT is a 3x3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

Key Factors Examined by PESTEL Analysis:

Political – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

Economic – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

Sociological – What cultural and societal aspects will work upon the demand for the business's products and operations?

Technological – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

Environmental – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

Legal – What laws and legislation will exert influence on the style the business is carried out?

IFE, EFE, IE Matrices

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

Porter Five Forces Analysis

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

VRIO Analysis

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

Reputation

Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?

Rare?

Costly to imitate?

Organized properly?
