Abstracts

ARM Holdings plc Fundamental Company Report provides a complete overview of the company's affairs. All available data is presented in a comprehensive and easily accessed format. The report includes financial and SWOT information, industry analysis, opinions, estimates, plus annual and quarterly forecasts made by stock market experts. The report also enables direct comparison to be made between ARM Holdings plc and its competitors. This provides our Clients with a clear understanding of ARM Holdings plc position in the <u>Semiconductor</u> Industry.

The report contains detailed information about ARM Holdings plc that gives an unrivalled in-depth knowledge about internal business-environment of the company: data about the owners, senior executives, locations, subsidiaries, markets, products, and company history.

Another part of the report is a SWOT-analysis carried out for ARM Holdings plc. It involves specifying the objective of the company's business and identifies the different factors that are favorable and unfavorable to achieving that objective. SWOT-analysis helps to understand company's strengths, weaknesses, opportunities, and possible threats against it.

The ARM Holdings plc financial analysis covers the income statement and ratio trend-charts with balance sheets and cash flows presented on an annual and quarterly basis. The report outlines the main financial ratios pertaining to profitability, margin analysis, asset turnover, credit ratios, and company's long-

term solvency. This sort of company's information will assist and strengthen your company's decision-making processes.

In the part that describes ARM Holdings plc competitors and the industry in whole, the information about company's financial ratios is compared to those of its competitors and to the industry. The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.

Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of ARM Holdings plc business.

About ARM Holdings plc

ARM Holdings plc designs microprocessors, physical IP and related technology and software, and sells development tools for high-volume embedded applications. ARM licenses and sells its technology and products to international electronics companies, which in turn manufacture, market and sell microprocessors, application-specific integrated circuits (ASICs) and application-specific standard processors (ASSPs) based on ARM's technology to systems companies for incorporation into a variety of end products.

The company also licenses and sells development tools directly to systems companies and provides support services to its licensees, systems companies, and other systems designers. ARM's principal geographic markets are Europe, the U.S. and Asia Pacific.

Products and Services

ARM's comprehensive product offering includes the following: microprocessor cores, such as 16/32-bit RISC microprocessors cores, including specific functions such as video and graphics IP and on-chip fabric IP; embedded software; physical IP; development tools; and support and maintenance services.

The ARM Microprocessor Families

ARM architecture processors offer a range of performance options in the ARM7 family, ARM9 family, ARM11 family, ARM Cortex family and ARM SecurCore family. ARM offers a range of processor cores integrated with memory system solutions, such as Cache Memories, Memory Protection Units, and Memory Management Units.

ARM7 microprocessor core is ARM's licensed product. It uses the ARMv4T instruction set with Thumb extension, enhanced Multiply, and EmbeddedICE extensions integrated with in the core. The ARM7 offers 32-bit architecture capable of operating from 8/16-bit memory on an 8/16-bit bus for low system cost through the implementation of the Thumb instruction set.

ARM9 family: The ARM9 family comprises a range of microprocessors in the 150-250MHz range. Each processor has been designed for a specific application or function, such as an application processor for a feature phone or running a WiFi protocol stack.

ARM11 family: The ARM11 family comprises a range of microprocessors in the 300-600MHz range. Each processor has been designed for a specific application or function, such as an application processor for a smart phone or controlling the engine management system in a car.

ARM Cortex family: This is ARM's family of processor cores based on version 7 of the ARM Architecture. The family is split into three series: A Series targeting applications processors running operating systems; R Series targeting realtime deeply embedded markets and running Real Time Operating Systems (RTOSs); and M Series addressing the needs of the low cost microcontroller markets.

Graphics IP

The company has acquired Falanx Microsystems AS, a Norwegian 3D Graphics IP company. Falanx develops graphics accelerator IP and software for semiconductor system-on-chip (SoC) vendors that deliver multimedia images.

Video IP

In December 2008, ARM acquired Logipard AB, a video processor and imaging technology company. The acquisition of video processor technology builds on the

success of the ARM's 3D graphics processor, and enables ARM to provide customers with an integrated multimedia platform.

Physical IP

The company, through Artisan Components, Inc. (Artisan), provides physical IP components for the design and manufacture of complex SoC integrated circuits (ICs).

PIPD

The company provides physical IP components for the design and manufacture of integrated circuits, including SOCs. Its products include embedded memory, standard cell, input/output components and analog and mixed-signal products. The company's physical IP components are developed for various process geometries ranging from 28nm - 250nm design. The company licenses its products to customers for the design and manufacture of integrated circuits used in applications, such as portable computing devices, communication systems, cellular phones, consumer multimedia products, automotive electronics, personal computers and workstations.

The company's physical IP components are developed and delivered using a proprietary methodology called 'Process-Perfect

The above Company Fundamental Report is a half-ready report and contents are subject to change.

It means that we have all necessary data in our database to prepare the report but need **2-3 days** to complete it. During this time we are also updating the report with respect to the current moment. So, you can get all the most recent data available for the same price. Please note that preparation of additional types of analyses requires extra time.

ANALYSIS FEATURES

SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

Enhanced SWOT Analysis

Enhanced SWOT is a 3×3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

Key Factors Examined by PESTEL Analysis:

Political – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

Economic – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

Sociological – What cultural and societal aspects will work upon the demand for the business's products and operations?

Technological – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

Environmental – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

Legal – What laws and legislation will exert influence on the style the business is carried out?

IFE, EFE, IE Matrices

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

Porter Five Forces Analysis

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

VRIO Analysis

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

Reputation

Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?
Rare?
Costly to imitate?
Organized properly?
