Abstracts

Aruba Networks, Inc. Fundamental Company Report provides a complete overview of the company's affairs. All available data is presented in a comprehensive and easily accessed format. The report includes financial and SWOT information, industry analysis, opinions, estimates, plus annual and quarterly forecasts made by stock market experts. The report also enables direct comparison to be made between Aruba Networks, Inc. and its competitors. This provides our Clients with a clear understanding of Aruba Networks, Inc. position in the [Computers and Electronic Equipment](#) Industry.

The report contains detailed information about Aruba Networks, Inc. that gives an unrivalled in-depth knowledge about internal business-environment of the company: data about the owners, senior executives, locations, subsidiaries, markets, products, and company history.

Another part of the report is a SWOT-analysis carried out for Aruba Networks, Inc.. It involves specifying the objective of the company's business and identifies the different factors that are favorable and unfavorable to achieving that objective. SWOT-analysis helps to understand company's strengths, weaknesses, opportunities, and possible threats against it.

The Aruba Networks, Inc. financial analysis covers the income statement and ratio trend-charts with balance sheets and cash flows presented on an annual and quarterly basis. The report outlines the main financial ratios pertaining to profitability, margin analysis, asset turnover, credit ratios, and company's long-

term solvency. This sort of company's information will assist and strengthen your company's decision-making processes.

In the part that describes Aruba Networks, Inc. competitors and the industry in whole, the information about company's financial ratios is compared to those of its competitors and to the industry. The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.

Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of Aruba Networks, Inc. business.

About Aruba Networks, Inc.

Aruba Networks, Inc. provides distributed enterprise networks that securely connect local and remote users to corporate IT resources.

The company's product portfolio encompasses: high-speed 802.11a/b/g/n wireless local area networks (WLANs); virtual branching networking solutions for branch offices and teleworkers; and network operations tools, including analyzers, wireless intrusion prevention systems, and the AirWave Wireless Management Suite — for managing wired, wireless, and mobile device networks.

Products

ArubaOS

ArubaOS serves as the system software for its architecture. It integrates user-based security, application-aware RF services, and wireless LAN access to deliver the mobile networking solution for large and mid-sized enterprises.

Software Modules for ArubaOS

Policy enforcement firewall — Delivers user and group policy enforcement. Policies can be centrally defined and enforced on a per-user or per-group basis, following users as they move throughout the enterprise network.

Wireless intrusion protection — Identifies and protects against malicious attacks on wireless networks, as well as vulnerabilities caused by unauthorized access points and client devices.

xSec — Provides wired and wireless Federal Information Processing Standard (FIPS) 140-2 validated encryption technology designed for high-security networks.

Mobility Controllers

The company's mobility controllers oversee the operation of its secure mobility solutions. These purpose-built platforms run ArubaOS and its associated software modules, and can scale to meet the needs of multi-national networks while handling the high-throughput needs of 802.11n wireless networks. The controllers share a common hardware architecture that includes control processor, high-performance programmable network processor unit, and programmable encryption engine. Multi-Service Mobility Controllers aggregate network traffic from access points, process it using its software controls, and deliver it to the network.

The company's family of controllers includes multiple models, sized, and priced to support various applications from small offices and retail stores to branch and regional offices to campuses and multi-national deployments.

Access Points

The company's access points serve as on-ramps that aggregate user traffic onto the enterprise network and direct this traffic to Mobility Controllers. In addition to providing network access, its wireless access points provide security monitoring services for wireless networks. Wireless access points, available in a range of indoor and outdoor versions, provide connectivity to clients using 802.11a/b/g/n Wi-Fi, which is supported by an array of consumer and commercial devices.

Virtual Branching Networking Solutions

The company's Virtual Branch Networking software does for branch connectivity and security what data center virtualization did for desktop applications. Virtual Branch

Networking turns the remote networking model on its head by virtualizing services at data center controllers.

Management Analytics and Threat Prevention

The company offers a suite of applications for planning, monitoring, fault management, real-time troubleshooting, reporting, RF coverage and location visualization for designing, maintaining, and securing wireless networks. Its patent-pending wireless intrusion detection and prevention (WIDP) system features a two-tier system architecture — dual-radio sensors and a central security server. This wireless security solution incorporates the wireless threat protection framework, including user-defined threat signatures — for threat detection, attack prevention, no wireless policy enforcement, and compliance reporting inside the enterprise.

AirWave Wireless Management Suite

AirWave Wireless, a division of Aruba Networks, provides specialized tools to centrally manage multi-vendor wireless LAN, mesh, and WiMax networks. The AirWave suite provides a single console that gives the entire IT staff visibility and control over their wireless network and its users.

In addition to providing multi-vendor mobility management tools, AirWave software can be used f

The above Company Fundamental Report is a half-ready report and contents are subject to change.

It means that we have all necessary data in our database to prepare the report but need **2-3 days** to complete it. During this time we are also updating the report with respect to the current moment. So, you can get all the most recent data available for the same price. Please note that preparation of additional types of analyses requires extra time.

ANALYSIS FEATURES

SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

Enhanced SWOT Analysis

Enhanced SWOT is a 3x3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

Key Factors Examined by PESTEL Analysis:

Political – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

Economic – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

Sociological – What cultural and societal aspects will work upon the demand for the business's products and operations?

Technological – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

Environmental – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

Legal – What laws and legislation will exert influence on the style the business is carried out?

IFE, EFE, IE Matrices

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

Porter Five Forces Analysis

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

VRIO Analysis

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

Reputation

Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?

Rare?

Costly to imitate?

Organized properly?
