company's decision-making processes.

In the part that describes Aurios Inc. competitors and the industry in whole, the information about company's financial ratios is compared to those of its competitors and to the industry. The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.

Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of Aurios Inc. business.

About Aurios Inc.

Aurios, Inc. engages in the production, marketing, and distribution of vibration isolation products to the audio and video markets in the United States. Its products include the Classic Media Isolation Bearing (the Classic MIB), the Pro Media Isolation Bearing (the PRO MIB) and the Isotone Media Isolation Bearing (the Isotone).

Products

The company offers three Media Isolation Bearings: the Aurios Pro Max Media Isolation Bearing, the Aurios Classic Media Isolation Bearing and the Aurios Isotone Media Isolation Bearing. The manner in which the bearings alter body wave transmissions is a function of material selection, surface harness, and material volume.

The Pro Max replaces the Aurios Pro bearing, and is engineered to offer the same performance. The size of the Pro Max is approximately one inch high and two and one-half inches in diameter. The Pro Max: re-configures the effective mass of the original Pro bearing and adds 2% more mass to the critical wave pathway; and reduces the critical surface contact areas by 25%, thus enhancing the level of decoupling. The Pro Max is used for large speakers. These bearings can be used in a home, in a recording studio and on stage. The weight capacity per bearing is 500 lbs (227 kgs). The Pro Max can be used under DVD/CD players, amps, preamps, turntables and power

conditioners.

The Aurios Classic Media Isolation Bearing is a slimmed down model in the Aurios product line. These bearings are also placed under amps, preamps, CD/DVD players, turntables, speakers and power conditioners. The size of the Classic is approximately one inch high and one and one-half inches in diameter.

License Agreement

The company has a worldwide license from True Gravity Enterprises, Inc. (TGE) to produce the Aurios Pro Max Media Isolation Bearing, Aurios Classic Media Isolation Bearing and the Aurios Isotone Media Isolation Bearing, and to sell these products under the Aurios name.

Sales and Marketing

The company sells its products domestically through a single internet based distributor of audio products and accessories. Internationally, it sells through a few high-end specialty stores in the United Kingdom, Indonesia and Singapore.

Competition

The company's competitors include Kinetics Systems, Inc.; Bright Star; Audioquest; Final Labs; and Symposium.

History

Aurios, Inc. was founded in 2001.

The above Company Fundamental Report is a half-ready report and contents are subject to change.

It means that we have all necessary data in our database to prepare the report but need **2-3 days** to complete it. During this time we are also updating the report with respect to the current moment. So, you can get all the most recent data available for the same price. Please note that preparation of additional types of analyses requires extra time.

ANALYSIS FEATURES

SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

Enhanced SWOT Analysis

Enhanced SWOT is a 3x3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

Key Factors Examined by PESTEL Analysis:

Political – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

Economic – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

Sociological – What cultural and societal aspects will work upon the demand for the business's products and operations?

Technological – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

Environmental – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

Legal – What laws and legislation will exert influence on the style the business is carried out?

IFE, EFE, IE Matrices

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

Porter Five Forces Analysis

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

VRIO Analysis

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

Reputation

Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?

Rare?

Costly to imitate?

Organized properly?
