Abstracts

Biocompatibles International plc Fundamental Company Report provides a complete overview of the company's affairs. All available data is presented in a comprehensive and easily accessed format. The report includes financial and SWOT information, industry analysis, opinions, estimates, plus annual and quarterly forecasts made by stock market experts. The report also enables direct comparison to be made between Biocompatibles International plc and its competitors. This provides our Clients with a clear understanding of Biocompatibles International plc position in the Industry.

The report contains detailed information about Biocompatibles International plc that gives an unrivalled in-depth knowledge about internal business-environment of the company: data about the owners, senior executives, locations, subsidiaries, markets, products, and company history.

Another part of the report is a SWOT-analysis carried out for Biocompatibles International plc. It involves specifying the objective of the company's business and identifies the different factors that are favorable and unfavorable to achieving that objective. SWOT-analysis helps to understand company's strengths, weaknesses, opportunities, and possible threats against it.

The Biocompatibles International plc financial analysis covers the income statement and ratio trend-charts with balance sheets and cash flows presented on an annual and quarterly basis. The report outlines the main financial ratios pertaining to profitability, margin analysis, asset turnover, credit ratios, and

company's long-term solvency. This sort of company's information will assist and strengthen your company's decision-making processes.

In the part that describes Biocompatibles International plc competitors and the industry in whole, the information about company's financial ratios is compared to those of its competitors and to the industry. The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.

Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of Biocompatibles International plc business.

About Biocompatibles International plc

Biocompatibles International PLC engages in manufacturing advanced biomedical polymers for medical devices and drug delivery. The Company is focused on developing products that will improve patient outcomes in the treatment of cardiovascular disease, cancer and benign tumours.

Products and Programmes

Bead Block

Bead Block is a compressible, visibly-tinted polyvinyl alcohol (PVA) microsphere supplied in convenient prefilled syringes for use in embolisation therapy.

Embolisation therapy is a minimally invasive (non-surgical) procedure performed by interventional radiologists to treat tumours or vascular malformations by blocking the blood flow to the targeted area.

Embolisation therapy is a minimally invasive (non-surgical) treatment for:

Hypervascularised tumours - abnormal growths of benign or malignant tissue which

proliferate due to the over-development of blood vessels supplying the area

Arteriovenous malformations - an abnormal shunt between artery and vein that bypasses the normal capillary bed and can cause complications

During the procedure, an embolic material (often composed of tiny particles or beads made from a biomedical polymer) is injected into selected vessels to block the blood flow feeding the tumour or malformation, causing it to shrink over time. Embolisation is commonly used to treat a number of conditions, including: Hepatocellular carcinoma (HCC) - liver cancer tumours, Uterine fibroids - benign hypervascularised tumours of the uterus, which can cause pain, bleeding and infertility, Varicose veins and Aneurysms.

Drug Eluting Beads

Biocompatibles combines its expertise in drug elution with the N-fil Technology (embolic microspheres) to develop a drug-eluting bead for hepatocellular carcinoma (HCC) or Liver Cancer.

Chemo-embolisation, already an established treatment for HCC, involves combining two treatments in one procedure: chemotherapy and embolisation therapy. A chemotherapeutic drug is first mixed with a substance to increase its viscosity and then injected into the target area. An embolic agent is then administered in order to block blood flow to the area and seal in as much of the drug as possible (and prevent rapid washout of the drug).

Chemo-embolisation combines chemotherapy with embolisation therapy to treat malignant tumours such as hepatocellular carcinoma (HCC, or primary liver cancer) and colorectal metastases to the liver.

Biocompatibles is developing a drug-eluting bead for chemo-embolisation. The product in development is an embolic microsphere preloaded with Doxorubicin, a chemotherapy drug shown to be effective in treating liver cancer, but which has significant side-effects when administered systemically. It is anticipated this bead will improve the targeting and control of chemo-embolisation drug delivery (enhancing its effectiveness and minimising side-effects), while simplifying and refining the procedure as a whole.

Drug-Eluting Stents

Drug-eluting stents (DES) have revolutionised the treatment of coronary artery disease

by dramatically improving success rates of a minimally invasive alternative to open-heart surgery called percutaneous transluminal coronary angioplasty (PTCA).

Biocompatibles was responsible for the development of Dexamet, one of just three commercially available drug-eluting stents in the world. The Dexamet stent, a product of Abbott Laboratories, combines Biocompatibles' BiodivYsio stent design, PC Technology coating and the anti-inflammatory drug dexamethasone.

Biocompatibles is also supporting Abbott in further DES development, including a stent which uses the PC coating combined with Abbott's proprietary rapamycin analogue, ABT-578. Biocompatibles will earn a 2.5% royalty on PC Technology, plus 1% on the BiodivYsio stent design.

The success and potential of Biocompatibles' DES technology has led to further innovation in drug-eluting devices. The Company is currently applying its drug-elution technology to the development of drug-eluting embolic beads for use in embolisation therapy to treat liver cancer.

Dexamet Stent

The Dexamet drug-eluting stent (DES) is designed for use in PTCA coron

The above Company Fundamental Report is a half-ready report and contents are subject to change.

It means that we have all necessary data in our database to prepare the report but need **2-3 days** to complete it. During this time we are also updating the report with respect to the current moment. So, you can get all the most recent data available for the same price. Please note that preparation of additional types of analyses requires extra time.

ANALYSIS FEATURES

SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

Enhanced SWOT Analysis

Enhanced SWOT is a 3x3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

Key Factors Examined by PESTEL Analysis:

Political – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

Economic – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

Sociological – What cultural and societal aspects will work upon the demand for the business's products and operations?

Technological – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

Environmental – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

Legal – What laws and legislation will exert influence on the style the business is carried out?

IFE, EFE, IE Matrices

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

Porter Five Forces Analysis

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

VRIO Analysis

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

Reputation

Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?

Rare?

Costly to imitate?

Organized properly?
