Abstracts

Braintech Inc. Fundamental Company Report provides a complete overview of the company's affairs. All available data is presented in a comprehensive and easily accessed format. The report includes financial and SWOT information, industry analysis, opinions, estimates, plus annual and quarterly forecasts made by stock market experts. The report also enables direct comparison to be made between Braintech Inc. and its competitors. This provides our Clients with a clear understanding of Braintech Inc. position in the [Software and Technology Services](#) Industry.

The report contains detailed information about Braintech Inc. that gives an unrivalled in-depth knowledge about internal business-environment of the company: data about the owners, senior executives, locations, subsidiaries, markets, products, and company history.

Another part of the report is a SWOT-analysis carried out for Braintech Inc.. It involves specifying the objective of the company's business and identifies the different factors that are favorable and unfavorable to achieving that objective. SWOT-analysis helps to understand company's strengths, weaknesses, opportunities, and possible threats against it.

The Braintech Inc. financial analysis covers the income statement and ratio trend-charts with balance sheets and cash flows presented on an annual and quarterly basis. The report outlines the main financial ratios pertaining to profitability, margin analysis, asset turnover, credit ratios, and company's long-

term solvency. This sort of company's information will assist and strengthen your company's decision-making processes.

In the part that describes Braintech Inc. competitors and the industry in whole, the information about company's financial ratios is compared to those of its competitors and to the industry. The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.

Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of Braintech Inc. business.

About Braintech Inc.

Braintech, Inc. engages in the research and development, supply, commercialization, training, maintenance, and support of machine vision and vision guidance technologies, products and services for industrial robots and other types of machines and material handling in the industrial, and government markets.

Principal Products and Services

The company's software technologies, products, and services are suitable for both product inspection and location analysis applications, and the projects the company has completed have involved both applications. The vision guided robotic systems are used mainly in the manufacture and assembly of automobiles and automotive parts. The company develops machine vision and vision guided robotic software systems based on the customers' particular needs. Solutions that the company delivered range from single and multi-camera 2D systems to single and multi-camera 3D systems.

eVisionFactory

eVisionFactory (eVF) is a software platform which is intended to provide a software environment for the design, development, operation, and support of vision guided

robotic (VGR) systems.

The company's customers, primarily industrial system integrators, use eVF to develop custom vision guided robotic systems all based on a common software platform. The company has developed training procedures that allow other users, such as integrators and channel partners, to develop customized vision guided robotic systems. It includes a version of eVF in the vision guidance systems that the company delivers.

Single Camera 3D (SC3D): SC3D is the company's principal vision guidance technologies. A CCD camera is integrated into the robot gripper. The robot moves to position the camera near the part to be handled by the robot. A single image of the part is captured and the SC3D technology performs its analysis and determines the position of the part in 3D space, for example, its position on the x, y, z axis and its orientation (roll, pitch, and yaw angles).

Applications for SC3D include robot-handling applications involving precisely manufactured parts, such as engine heads and manifolds. The system provides the necessary accuracy for robots transferring parts to conveyors or placing parts precisely in a fixture.

AutoCal-3D: AutoCal-3D is an automated process for 3D calibration of a stationary or robot-mounted camera. AutoCal-3D eliminates steps involving operator input.

AutoTrain-3D: AutoTrain-3D is an automated process that facilitates the introduction or 'training' of new parts into a given eVF-based system running the SC3D technology.

AccuTest: AccuTest allows operators to validate the robustness of a vision guided robotic system before and during field deployment.

Xi2D (Single/Multi-Camera 2D): Xi2D consists of a single or multi-camera arrangement that views various features of interest.

DD3D (Direct Depth 3D): DD3D uses stereo vision for direct measurement and consists of a binocular camera arrangement to view a part or feature.

SR3D (Surround Vision 3D): SR3D is similar to SC3D but involves multiple cameras configured to view different areas of the same part.

IDM 2.5D (Inferential Depth Measurement): IDM 2.5D is targeted for processes that do

not require or allow for 3D part location variance. IDM 2.5D exploits visual cues, such as size and shape variations among parts to compute not only the planar x, y, and rotation of a given part but also its height, or z coordinate, relative to the robot's coordinate system.

RTPT (Real Time Part Tracking): RTPT uses one or more cameras to image a given part in real time and provides an industrial robot with a continuous stream of data about where the part is, how fast and in what direction it is moving. RTPT makes it possible for robots to work on parts while in motion, significantly improving production throughput. Other applications of the technology include dynamic materials handling, assembly or measurement where the objects of interest are in motion during the robotic process.

SL3D (Structured Light 3D): SL3D uses Structured Light (i.e. laser) patterns to calculate the position and orientation of sparsely featured objects (automotive body components and panels). A structured light pattern is projected onto the surface of an object and the reflection of this pattern is captured and analyzed to determine surface topology, object position, and orientation.

RBP (Random Bin Picking): RBP is an added eVF Vision Guided Robotic technology solution for unstructured random bin picking. RBP uses geometric pattern matching for candidate recognition, data analysis for location of parts in 3D, dynamic candidate scoring for finding the candidate to grasp, and dynamic interference detection to prevent collisions and provide optimal grasping.

eVisionEngine

eVisionEngine (eVE) offers the scientific benefits of the eVF platform and facilitates the development of custom applications by robot OEM's, vision software providers, and vision integrators. eVE provides vision science algorithms for 2D, 2.5D, and 3D pose calculations packaged with automatic calibration, automatic training, automatic testing and automatic model calculation. eVE allows robot manufacturers, vision system providers, smart camera manufactures, and system integrators to add VGR functionality to their products and solutions through application programming interfaces (API's).

Customers

The company has 170 product installations in approximately 40 locations with 20 different end-users. Additionally, it has sold approximately 15 development licenses.

Competitors

The company's competitors include Fanuc Robotics, ISRA, Kuka, Motoman, MVTec, ISRA, Radix Controls, integrators using Cognex cameras and software to create vision guided robotics solutions.

History

Braintech, Inc. was founded in 1987.

The above Company Fundamental Report is a half-ready report and contents are subject to change.

It means that we have all necessary data in our database to prepare the report but need **2-3 days** to complete it. During this time we are also updating the report with respect to the current moment. So, you can get all the most recent data available for the same price. Please note that preparation of additional types of analyses requires extra time.

ANALYSIS FEATURES

SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

Enhanced SWOT Analysis

Enhanced SWOT is a 3×3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

Key Factors Examined by PESTEL Analysis:

Political – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

Economic – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

Sociological – What cultural and societal aspects will work upon the demand for the business's products and operations?

Technological – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

Environmental – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

Legal – What laws and legislation will exert influence on the style the business is carried out?

IFE, EFE, IE Matrices

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

Porter Five Forces Analysis

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

VRIO Analysis

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

Reputation

Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?

Rare?

Costly to imitate?

Organized properly?
