Abstracts

Bucyrus International Inc. Fundamental Company Report provides a complete overview of the company's affairs. All available data is presented in a comprehensive and easily accessed format. The report includes financial and SWOT information, industry analysis, opinions, estimates, plus annual and quarterly forecasts made by stock market experts. The report also enables direct comparison to be made between Bucyrus International Inc. and its competitors. This provides our Clients with a clear understanding of Bucyrus International Inc. position in the [Heavy Machinery](#) Industry.

The report contains detailed information about Bucyrus International Inc. that gives an unrivalled in-depth knowledge about internal business-environment of the company: data about the owners, senior executives, locations, subsidiaries, markets, products, and company history.

Another part of the report is a SWOT-analysis carried out for Bucyrus International Inc.. It involves specifying the objective of the company's business and identifies the different factors that are favorable and unfavorable to achieving that objective. SWOT-analysis helps to understand company's strengths, weaknesses, opportunities, and possible threats against it.

The Bucyrus International Inc. financial analysis covers the income statement and ratio trend-charts with balance sheets and cash flows presented on an annual and quarterly basis. The report outlines the main financial ratios pertaining to profitability, margin analysis, asset turnover, credit ratios, and

company's long-term solvency. This sort of company's information will assist and strengthen your company's decision-making processes.

In the part that describes Bucyrus International Inc. competitors and the industry in whole, the information about company's financial ratios is compared to those of its competitors and to the industry. The unique analysis of the market and company's competitors along with detailed information about the internal and external factors affecting the relevant industry will help to manage your business environment. Your company's business and sales activities will be boosted by gaining an insight into your competitors' businesses.

Also the report provides relevant news, an analysis of PR-activity, and stock price movements. The latter are correlated with pertinent news and press releases, and annual and quarterly forecasts are given by a variety of experts and market research firms. Such information creates your awareness about principal trends of Bucyrus International Inc. business.

About Bucyrus International Inc.

Bucyrus International, Inc. engages in the design and manufacture of high productivity mining equipment for the extraction of coal, copper, oil sands, iron ore and other minerals in major mining centers worldwide. In addition to the manufacture of original equipment, the company also provides the aftermarket replacement parts and service for this equipment.

Segments

The company operates in two business segments: Surface Mining (including the principal products of Terex Mining) and Underground Mining. All of the products and services are marketed under the Bucyrus name. Its main markets for original equipment and aftermarket parts and service are Australia, Canada, China, India, South Africa, South America, and the United States.

SURFACE MINING SEGMENT

The Surface Mining Segment engages in the design, manufacture and marketing of draglines, electric mining shovels and rotary blasthole drills used for surface mining and provision of aftermarket replacement parts and service for these machines.

Original Equipment

The company's surface mining original equipment includes draglines, electric mining shovels, hydraulic excavators, drills, off-highway haul trucks, and highwall miners.

Draglines: Draglines are primarily used in coal mining applications to remove overburden by dragging a bucket through the overburden and carrying it away. The company's primary draglines weigh from 1,900 to 8,400 tons.

Electric Mining Shovels: Mining shovels are primarily used to load copper, coal, oil sands, iron ore, other mineral bearing materials, overburden or rock into trucks. There are two basic types of mining shovels: electric and hydraulic. The company offers a line of electric mining shovels, with available hoisting capability of up to 120 tons. The company has developed the 495 Series High-Performance shovels.

Rotary Blasthole Drills: Rotary blasthole drills are used to drill these holes and are usually described in terms of the diameter of the hole they bore. The company offers a line of rotary blasthole drills ranging in hole diameter size from 6.0 inches to 17.5 inches.

Aftermarket Parts and Services

The company has an aftermarket business that supplies replacement and upgrade parts and services for its installed base of original equipment. Its aftermarket offerings include engineered replacement parts, maintenance and repair labor, technical advice, refurbishment and relocation of machines, structural and mechanical engineering, non-destructive testing, repairs and rebuilds of machine components, product and component upgrades, turnkey assembly, equipment operation and equipment management under long-term maintenance and repair contracts. The company also distributes components that are consumed in the normal course of machine operation. A major portion of its international repair and maintenance services are provided through its global network of wholly owned foreign subsidiaries and overseas offices operating in Australia, Brazil, Canada, Chile, China, England, India, Peru, and South Africa.

Competition

The company's primary global competitor in electric mining shovels and draglines is Joy

Global Inc.'s P&H Mining Equipment division (P&H).

UNDERGROUND MINING SEGMENT

The Underground Mining segment, through DBT GmbH, supplies system solutions for underground coal mining worldwide. Its original equipment and aftermarket parts are manufactured in Germany, the United States (Pennsylvania, Virginia and Alabama), Poland, China, and Australia. The two main methods of underground mining are longwall and room and pillar mining.

Original Equipment

The company's underground mining original equipment includes longwall equipment and room and pillar equipment.

Longwall Equipment: The company's longwall equipment includes hydraulic roof supports and electro-hydraulic controls, automated plow systems, shearers, armored face conveyors, and crushers.

Hydraulic Roof Supports: Roof supports provide support to the mine roof during longwall mining. The company offers a range of roof supports suitable for mining heights from 0.6 m to 7.5 m with support capacities in excess of 1,200 tons per shield. |

The above Company Fundamental Report is a half-ready report and contents are subject to change.

It means that we have all necessary data in our database to prepare the report but need **2-3 days** to complete it. During this time we are also updating the report with respect to the current moment. So, you can get all the most recent data available for the same price. Please note that preparation of additional types of analyses requires extra time.

ANALYSIS FEATURES

SWOT Analysis

SWOT, which stands for Strengths, Weaknesses, Opportunities and Threats, is an analytical framework that identifies the internal and external factors that are favorable and unfavorable for a company.

Enhanced SWOT Analysis

Enhanced SWOT is a 3x3 grid that arranges strengths, weaknesses, opportunities and threats into one scheme:

How to use the strengths to take advantage of the opportunities?

How to use the strengths to reduce likelihood and impact of the threats?

How to overcome the weaknesses that obstruct taking advantage of the opportunities?

How to overcome the weaknesses that can make the threats a reality?

Upon answering these questions a company can develop a project plan to improve its business performance.

PESTEL Analysis

PESTEL (also termed as PESTLE) is an ideal tool to strategically analyze what influence different outside factors – political, economic, sociocultural, technological, environmental and legal – exert on a business to later chart its long term targets.

Being part of the external analysis when carrying out a strategic assessment or performing a market study, PESTEL gives an overview of diverse macro-environmental factors that any company should thoughtfully consider. By perceiving these outside environments, businesses can maximally benefit from the opportunities while minimizing the threats to the organization.

Key Factors Examined by PESTEL Analysis:

Political – What opportunities and pressures are brought by political bodies and what is the degree of public regulations' impact on the business?

Economic – What economic policies, trends and structures are expected to affect the organization, what is this influence's degree?

Sociological – What cultural and societal aspects will work upon the demand for the business's products and operations?

Technological – What impact do the technological aspects, innovations, incentives and barriers have on the organization?

Environmental – What environmental and ecological facets, both locally and farther afield, are likely to predetermine the business?

Legal – What laws and legislation will exert influence on the style the business is carried out?

IFE, EFE, IE Matrices

The Internal Factor Evaluation matrix (IFE matrix) is a strategic management tool helping audit or evaluate major weaknesses and strengths in a business's functional areas. In addition, IFE matrix serves as a basis for identifying and assessing relationships amongst those areas. The IFE matrix is utilised in strategy formulation.

The External Factor Evaluation matrix (EFE matrix) is a tool of strategic management that is typically utilised to assess current market conditions. It is an ideal instrument for visualising and prioritising the threats and opportunities a firm is facing.

The essential difference between the above mentioned matrices lies in the type of factors incorporated in the model; whilst the latter is engaged in internal factors, the former deals exceptionally with external factors – those exposed to social, political, economic, legal, etc. external forces.

Being a continuation of the EFE matrix and IFE matrix models, the Internal External matrix (IE matrix) rests upon an investigation of external and internal business factors

integrated into one suggestive model.

Porter Five Forces Analysis

The Porter's five forces analysis studies the industry of operation and helps the company find new sources of competitive advantage. The analysis surveys an industry through five major questions:

What composes a threat of substitute products and services?

Is there a threat of new competitors entering the market?

What is the intensity of competitive rivalry?

How big is the bargaining power of buyers?

How significant is the bargaining power of suppliers?

VRIO Analysis

VRIO stands for Value, Rarity, Imitability, Organization. This analysis helps to evaluate all company's resources and capabilities and bring them together into one aggregate table that includes:

Tangible resources

Financial

Physical

Technological

Organizational

Intangible resources

Human

Innovation and Creativity

Reputation

Organizational capabilities

The result of the analysis gives a clear picture of company's competitive and economic implications, answering the questions if the resources mentioned above are:

Valuable?

Rare?

Costly to imitate?

Organized properly?
